- DOCSIS (High Speed Cable Modem) Ready 90%
  - 15% cable modem subs by EOY 2003

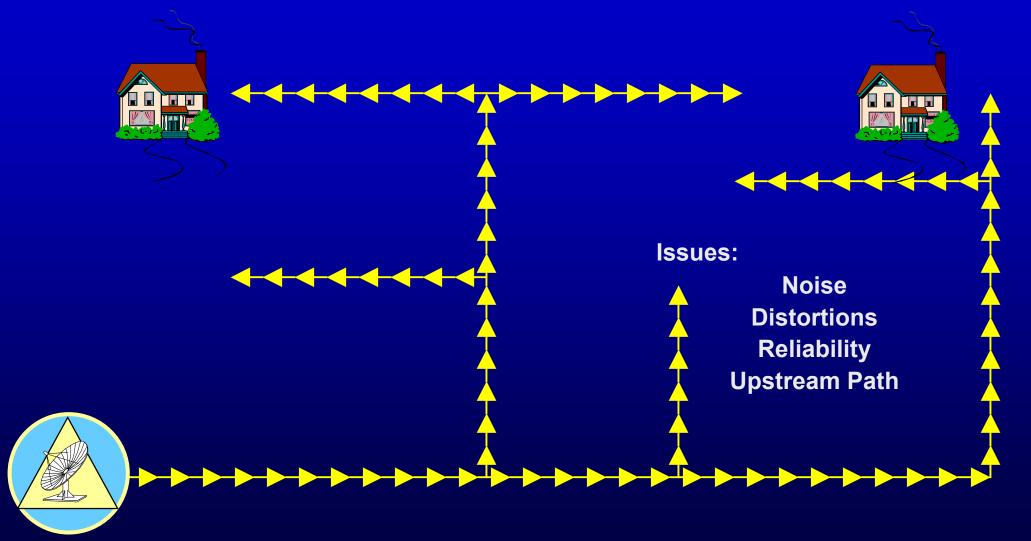

### Time Warner Digital Deployment by Location

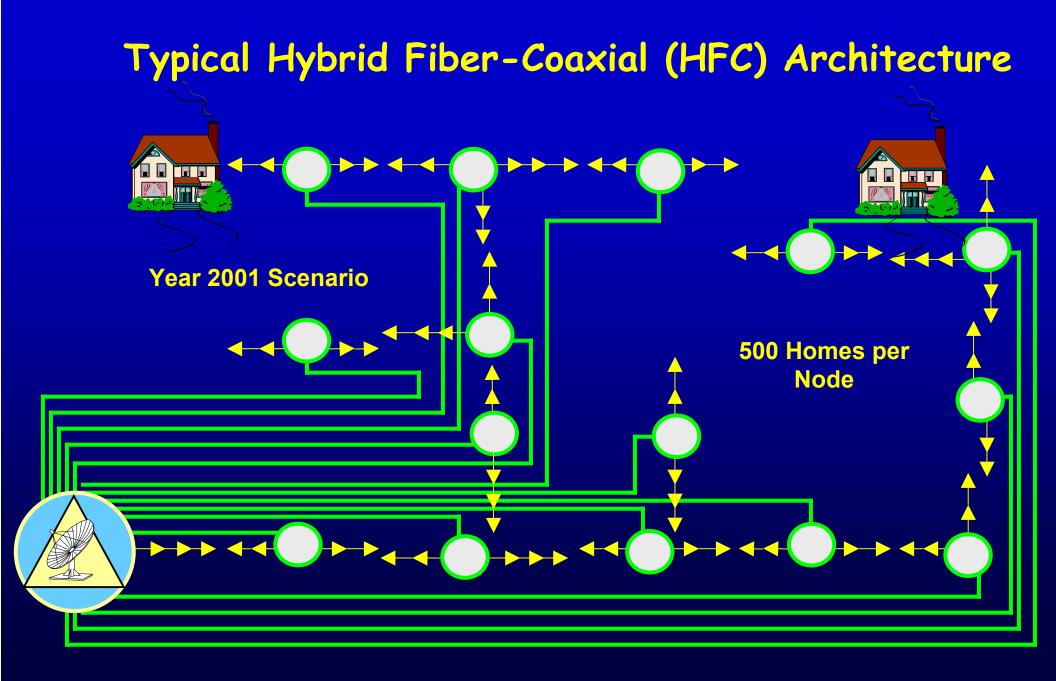

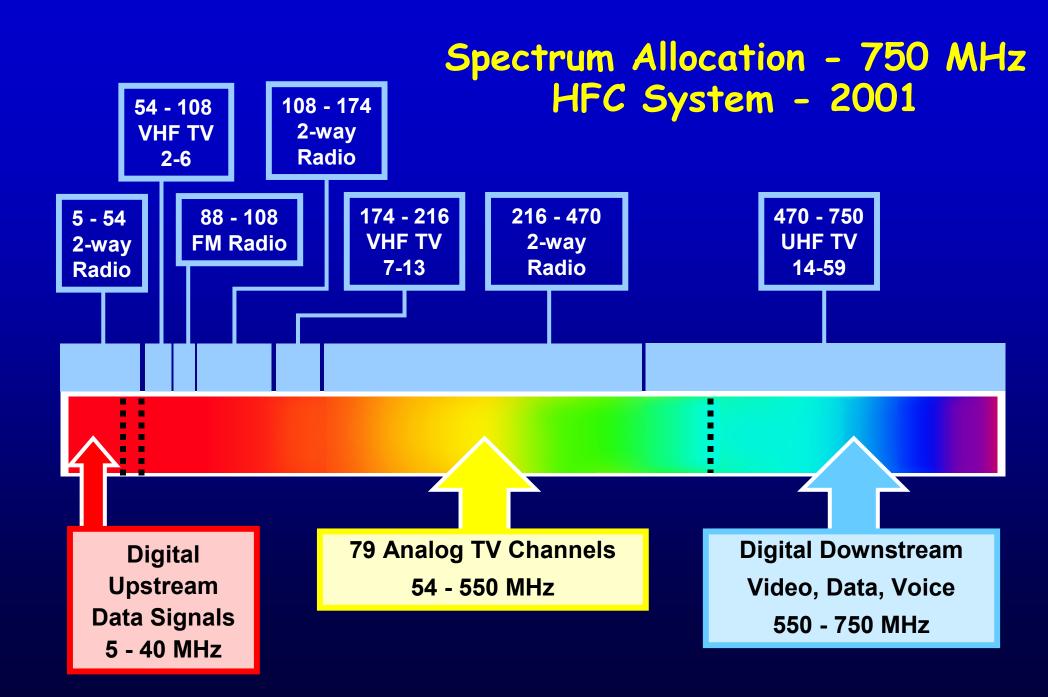

# Cable System Architecture

- HFC
- Spectrum Planning

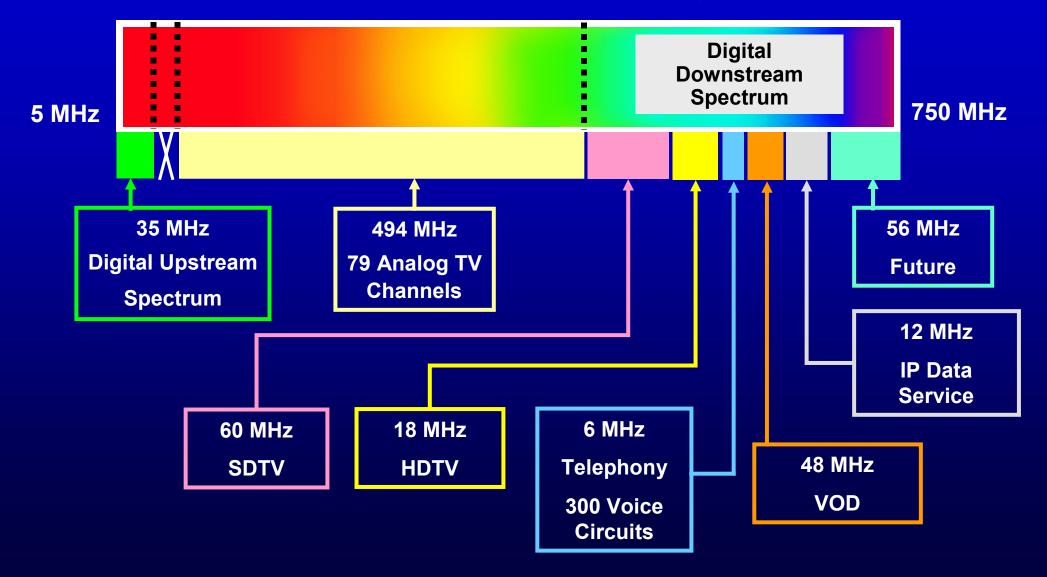

#### **Conventional Coaxial Tree & Branch Architecture**

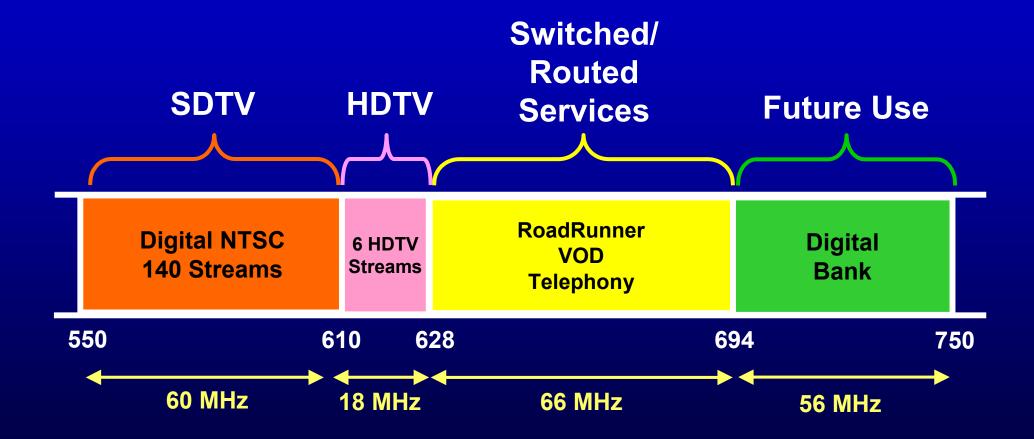

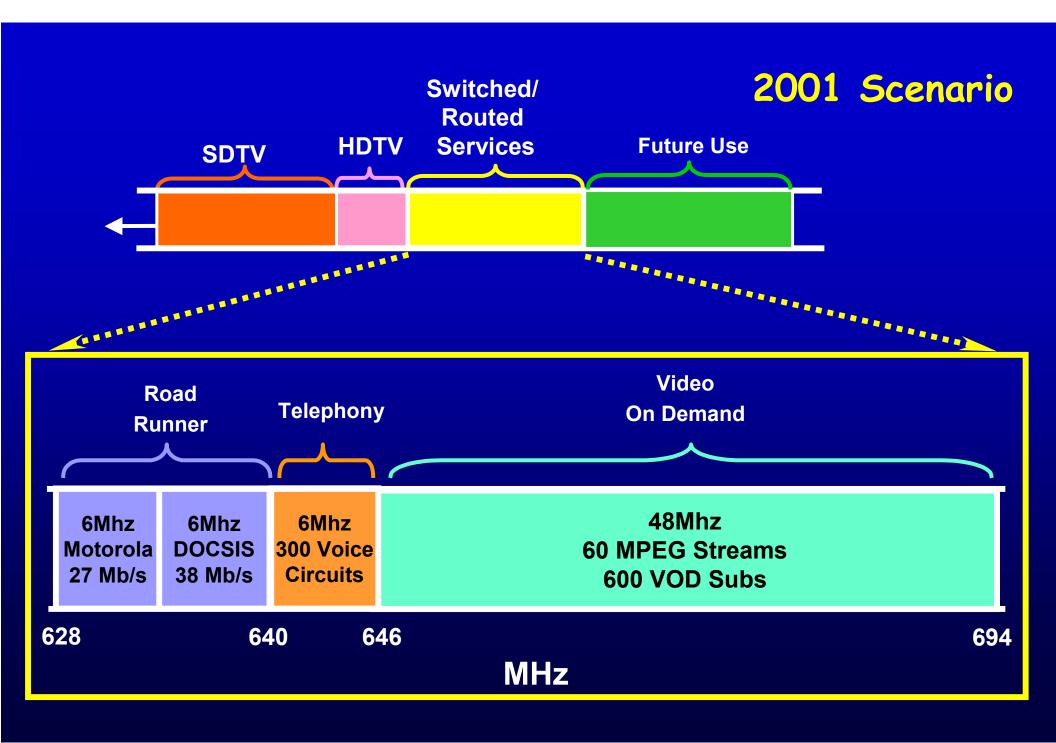

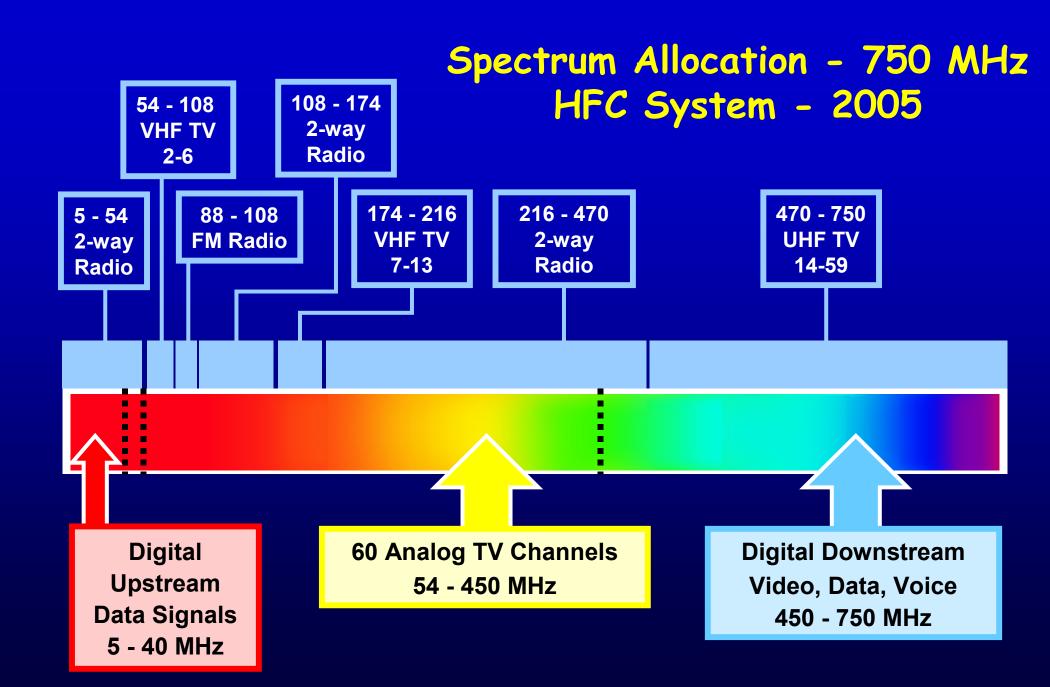

#### Coaxial Spectrum Allocation HFC System - 2001

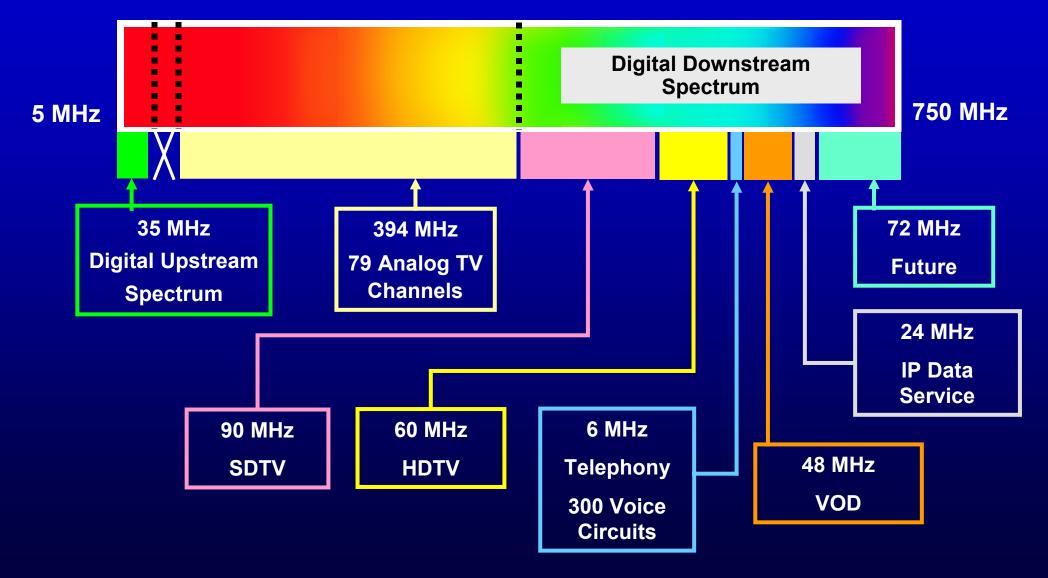

#### Digital Spectrum - 2001 (One Scenario)

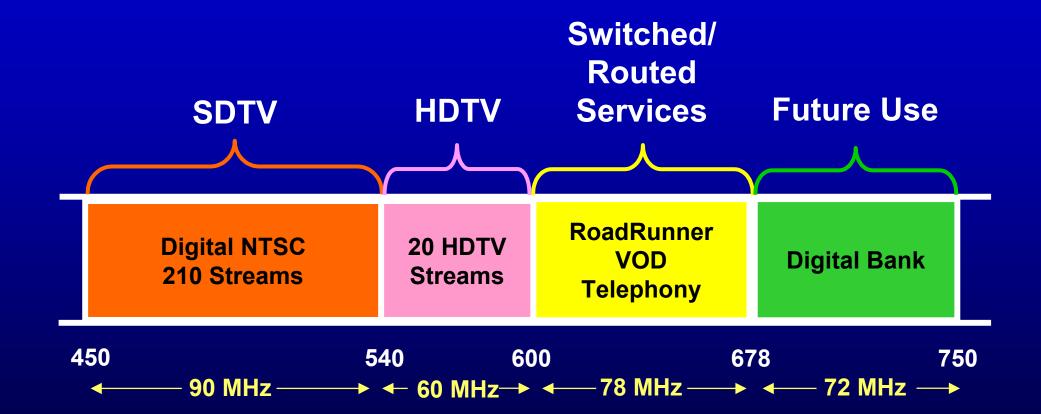

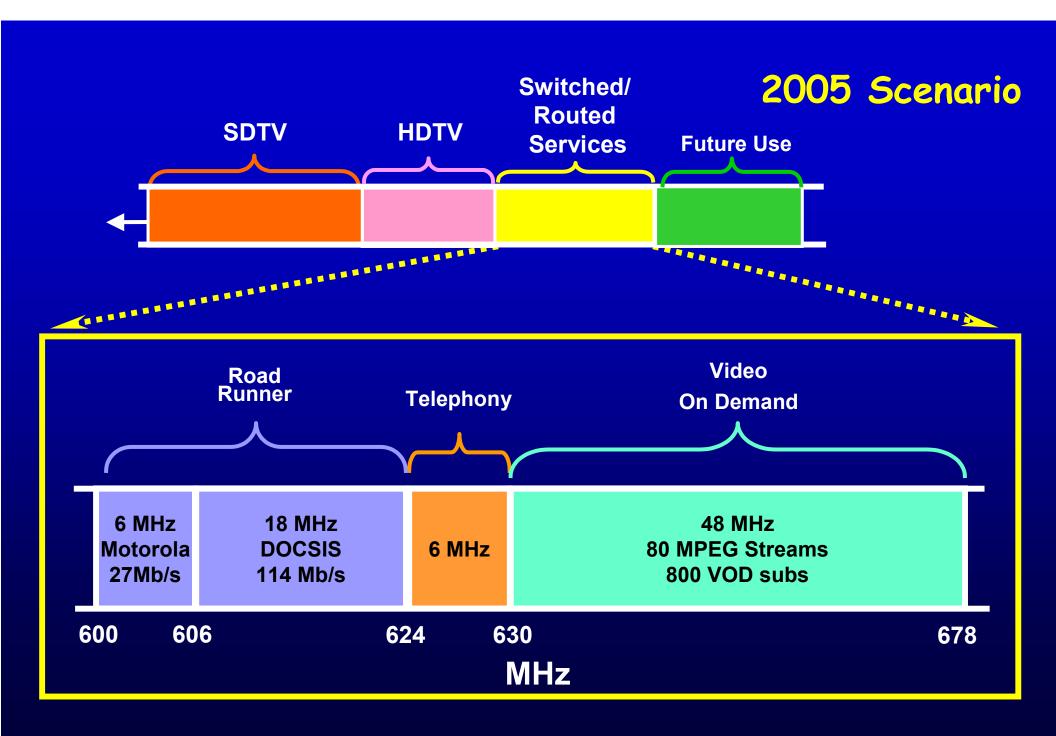

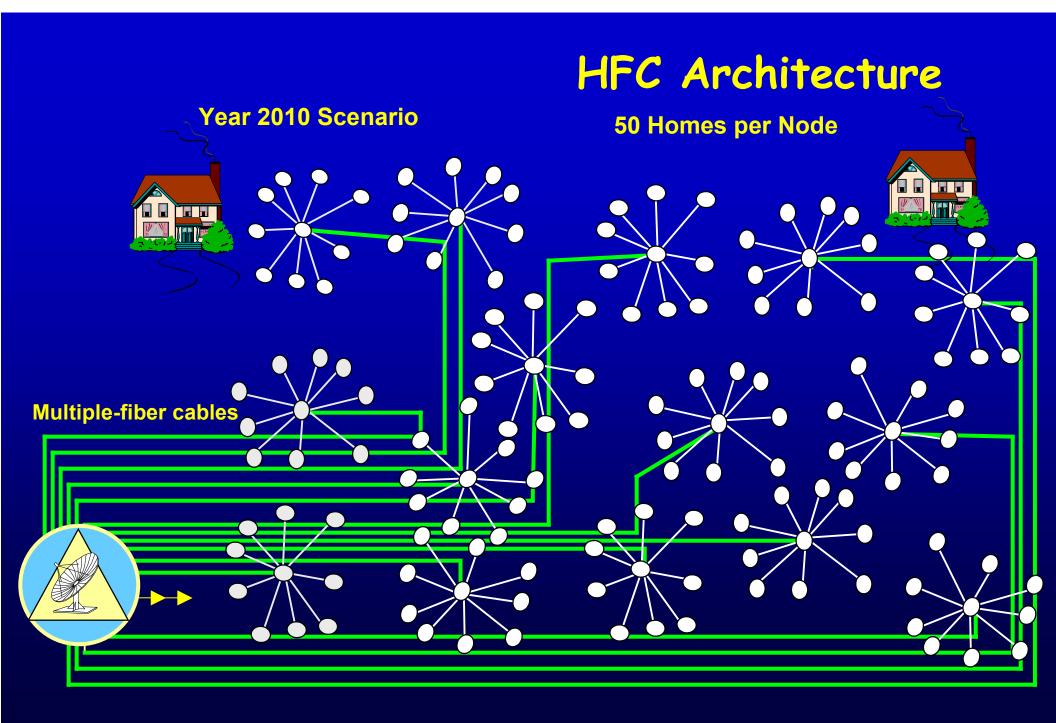

#### Coaxial Spectrum Allocation HFC System - 2005

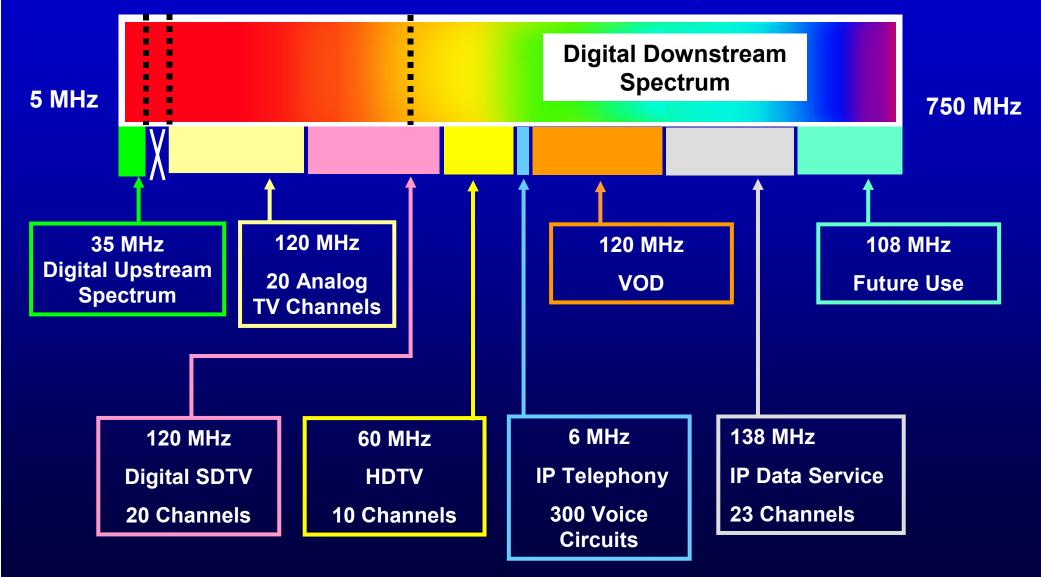

#### Digital Spectrum - 2005 (One Scenario)

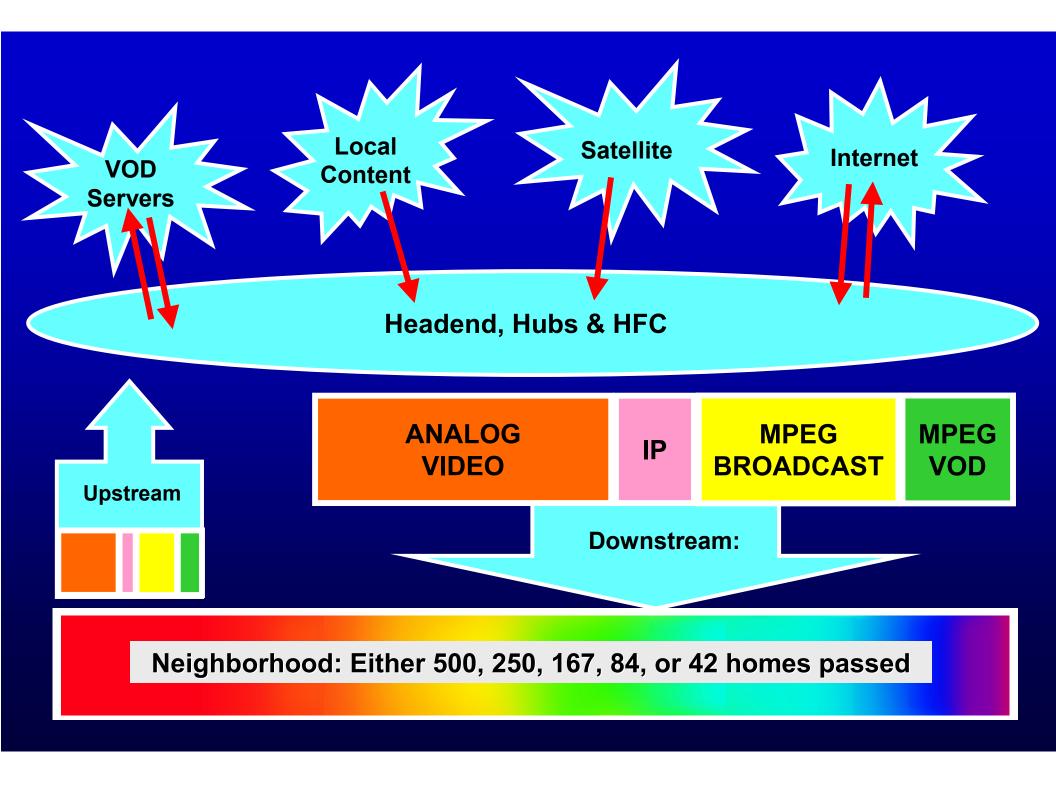

#### Coaxial Spectrum Allocation HFC System - 2010

### Digital Set-tops: Pegasus

- Born from FSN experiment, circa 1994
- MPEG-2, DVS and DAVIC standards based real-time two-way system
- Deployed in 38 out of 40 divisions
- Current services are:
  - More channels, more channels, more channels
  - On screen digital navigator

### **Coming Very Soon**

- Movies-On-Demand (MOD)
  - Need to resolve title availability
- Subscription VOD
- Enhanced TV
  - ATVEF triggers

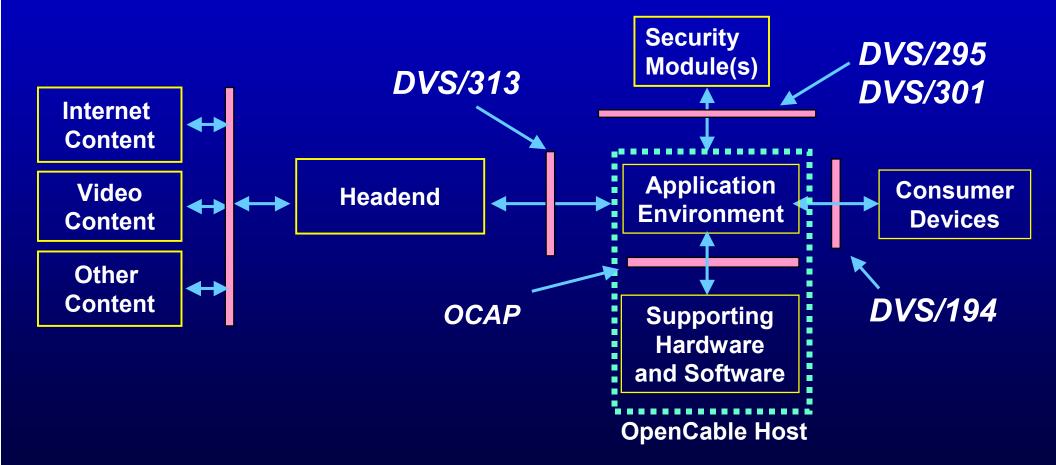

### **Coming Soon**

- Personal video recording service
  - Phase I via set-top boxes with hard disc drives
  - Phase II via network services
- Higher level integration of:
  - Data and voice services
  - Home networking

### **Industry Developments**

- OpenCable: Cable's Retail Initiative
  - OpenCable Application Platform: aka middleware
  - Separation of Security and Navigation: POD Module
  - Standards based

### **OpenCable** Architecture

## Opportunities

- Cable needs more HD content to differentiate itself from its competitors
  - Spectrum advantages
  - Local advantages
- Cable is a local infrastructure...enhanced services to increase local presence
